

FLEXIFRAME TENT SYSTEM

The UK's Most Flexible, Cost Effective Clearspan Frame Tent system for the Marquee Hire and Events Industry.

We are pleased to offer our Flexiframe system for Aliframe and Continental Frame tents.

PARTS BREAKDOWN FOR ALIFRAME TENTS

What are FlexiFrames?

Our Flexiframe system uses a system of different length beams and extension joints (knuckles) to maximise the spans you can achieve with minimum framework. For example, our Starter Package gives you 12m, 9m, 6m and 3m spans using 2 different roof beam elements.

The roof beams are interchangeable with our uprights. By using a 1.5m or 3m roof beam with a extension legs you can erect your Clearspan Frame Tent on ground with challenging level changes!

FLEXIFRAMES

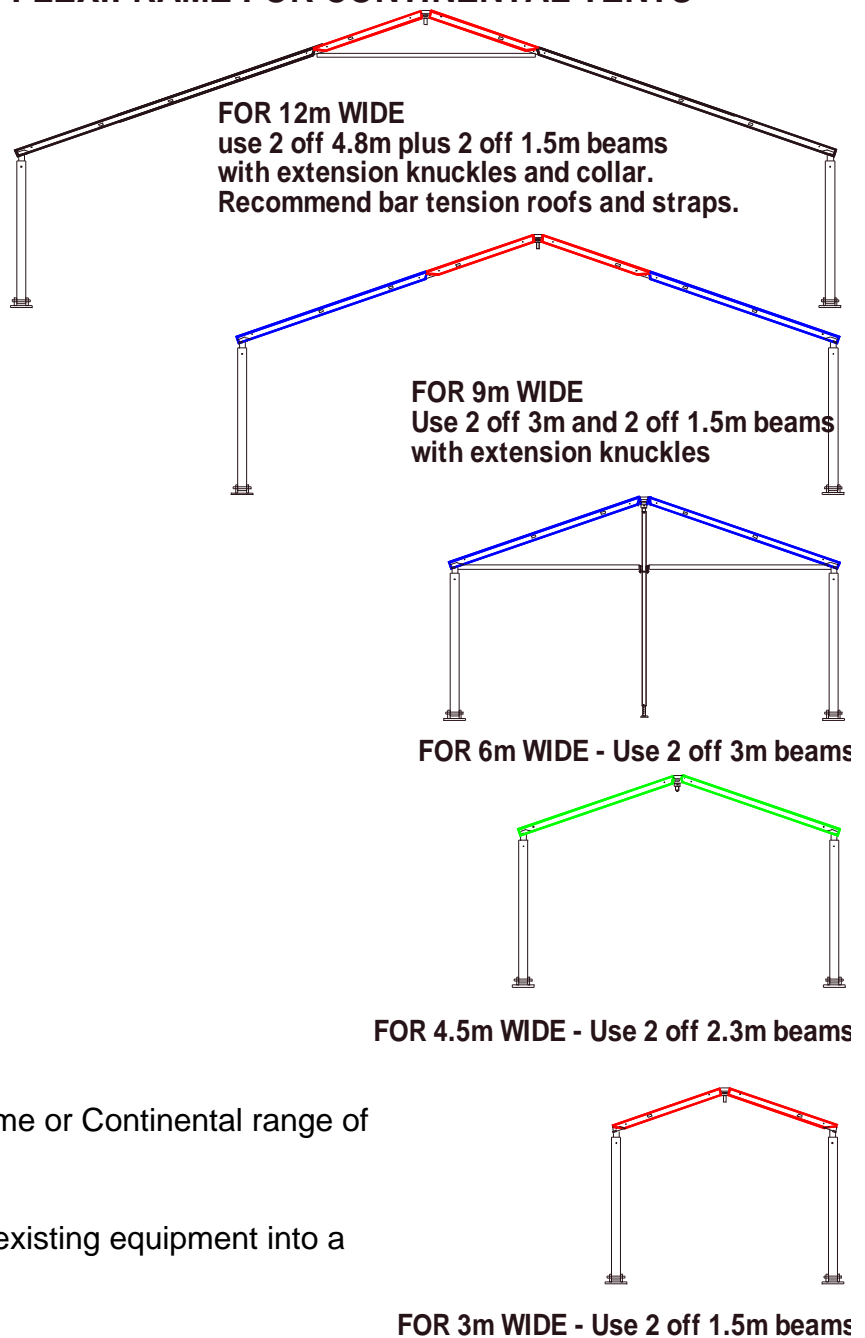

Why use Flexi-Frames?

Our Flexi- Frame system:

- Is **Cost Effective**, due to the unique flexibility of our framework you don't have to buy new roof beams or gable end framework when you need a new span.
- It reduces **Stock Management** with lower number of roof beams/uprights to manage and
- Enables you to take on those **"impossible" jobs** as the components parts have been designed to adapt to unusual situations.

FLEXIFRAME FOR CONTINENTAL TENTS

BARKERS Marquees Offer:

- Our own Flexiframe Packages for Aliframe or Continental range of Clearspan Frame Tents
- OR
- Our customised service to convert your existing equipment into a Flexiframe system.
